Kasm

Kasm Disposables

Secure cloud browsers and desktops for individuals

Kasm is a web accessible desktop and isolation platform that is focused on accessibility and security by allowing users to access applications in an isolated and fresh environment **every time** they connect to the web.

Our newest product, Kasm Disposables was created with the individual user in mind. Users have the ability to work from any location, at any time. Similar to a VPN, the connection between you and Kasm are encrypted, but Kam goes a step further. Each new session provides a clean slate from which you work, protecting your privacy from malware, trackers and cookies in a way traditional VPNs can't.

In a world where working remotely and distance learning has become our new normal, make protecting your internet security a priority. Kasm's safe and secure environments make it easy to virtually network with friends, colleagues and classmates.

Kasm Disposables *Features*

✓ *Privacy*

Work in private from a cafe, hotel, or anywhere. Like a VPN, the connection between you and Kasm are encrypted, but Kasm goes a step further! Each new session provides a clean web slate, protecting your privacy from trackers and cookies in ways traditional VPNs can't

✓ *Security*

Because Kasm provides a safe, secure and disposable environment to surf the web, every time you get on to the internet, users are protected from malware, phishing and ransomware. Browse the internet with peace of mind

✓ *Collaboration*

Sharing a remote browser and chat with friends or colleagues is easy. If you want to watch a video or brainstorm on a project with a friend, just enable sharing on your session at anytime and invite others to join you, creating seamless collaboration

✓ *Affordable*

Kasm Disposables was created with individual users in mind. It comes at a great low cost that's affordable for anyone looking for enhanced internet security while surfing the web
